"

Gaining 14 years of experience in IT, I know how the software outsourcing industry is growing in Vietnam. I also realize that the agile methodology allows clients to track the process, which cuts down time and risks as well as helps maximize the potential of developers. Moreover, I am hungry to help businesses run more smoothly through technology innovation. All of those thoughts have led to the foundation of IDS Software.

SOFTWARE VIETNAM CO.,LDT INDUSTRIES & SERVICES

When it comes to software development outsourcing, there are 3 remarkable factors to make it competitive compared to other types of services: working process, dedicated team model and technologies.

Serving as a third-party service provider, we handle all the tasks in software development projects to offer services at sensible prices. Our dedicated team has a strong foundation of technology to assist you at any stage of your product development life cycle, from discovery to ongoing post-launch enhancement.

We started our journey with the 2012 award with Belga (**Best ICT Product Award**), therefore Belga has always been one of the most special clients. We has provided custom software development service to them, from designing, executing to maintaining various tools to support their members

Software Development Outsourcing SOFTWARE VIETNAM CO.,LDT INDUSTRIES & SERVICES

Custom Software Development

We join in all steps of custom software development, which are:

Planning: Firstly, we define problems and calculate the strengths and weaknesses of the projects to make the plan as well as take part in consultancy.

Analysis: Having a strong base of technology, we analyze our software performance at various stages to estimate the whole project as accurately as possible. This step also helps us write down the necessary requirements.

Design: After the analysis, we build the architect of the project to rule out predictable errors by setting a standard and following it.

Development & Implementation: Once the design is done, we start developing the software with data recording going on in the background. After that, implementation is when the product goes through a pilot study to make sure it's functioning properly.

Testing: The software must be checked to find out if there is any bug and how to fix it.

Maintenance: Our job doesn't end when the software is delivered to customers. We keep track to maintain the software quality, as we are always ready to correct any error or upgrade the software to catch up with alterations.

Machine Learning

this amazing Artificial Intelligence is now being utilized in different businesses and industries of different types. Machine learning has applications in all types of industries, including manufacturing, retail, healthcare and life sciences, travel and hospitality, financial services, and energy, feedstock, and utilities. Use cases include:

Manufacturing. Predictive maintenance and condition monitoring Retail. Upselling and cross-channel marketing Healthcare and life sciences. Disease identification and risk satisfaction Travel and hospitality. Dynamic pricing Financial services. Risk analytics and regulation Energy. Energy demand and supply optimization
